

## Post-Test Questionnaire

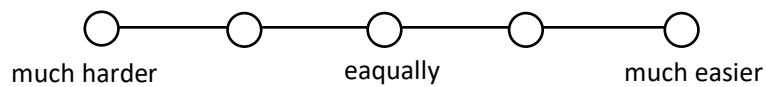

Testvariant B

Test-No.

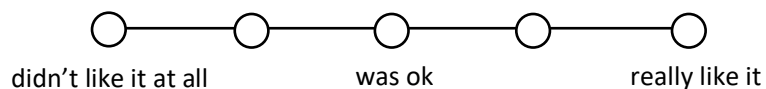

Semester:

Following the usability test, we have a few more questions for you. Please answer honestly and in detail and take your time when answering the questions.

1. Compared to the previous work on the local computers in the Linux Lab, how difficult/easy was it for you to work with the university's cluster?

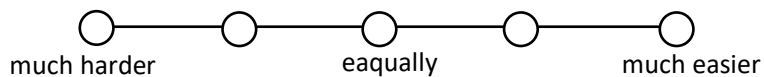

2. How did you like the usability test, the tasks and working with EduMPI?

What did you like on EduMPI? Please name three things you liked.

What didn't you like on EduMPI? Please name three things you didn't like.

3. How easy/difficult was it for you to work with EduMPI compared to TAU, which you know from the lecture?

4. If you were to program something in MPI in the future, would you like to work on the university's cluster or would you prefer to use a local stand-alone computer (e.g. in the Linux Lab)? Would you use EduMPI? Explain your answer.

5. Would you use EduMPI for the performance analysis of your parallel programs in the future or would you rather use TAU or not perform any performance analysis at all? Explain your answer.

6. Should work on the cluster and performance analysis with EduMPI become an integral part of the "Parallel Programming" course in future semesters? Do you think that EduMPI can make learning parallel programming easier or more difficult? Explain your answer.
